Professional Summary

AI Solutions Expert with a robust background in mathematics, computer science, and machine learning. Proficient in developing AI-driven automation, predictive analytics, and recommendation systems. Highly skilled in Python, TensorFlow, PyTorch, and Scikit-Learn, leveraging these tools to design and deploy impactful AI solutions. Proven ability to optimize processes, enhance user experiences, and generate strategic insights through data and AI.

Technical Skills

- **Programming Languages:** Python, MATLAB, Julia, Golang
- **AI/ML Frameworks:** TensorFlow, PyTorch, Scikit-Learn, Hugging Face, NLTK, SpaCy
- **Machine Learning Expertise:** NLP, Predictive Modeling, Deep Learning, Recommendation Systems, Multi-modal Data Processing, Statistical Analysis, Algorithm Development
- **Development Practices:** Agile Methodologies, Version Control (Git), Unit Testing, Code Reviews

Professional Experience

- Machine Learning Researcher** *Universidad Nacional de Colombia* Aug 2024 – Present
- Developed a machine learning model to optimize FIB-SEM data processing, significantly improving image analysis efficiency.
 - Applied advanced numerical methods for in-depth analysis of complex multi-modal datasets using Python and MATLAB.
 - Collaborated with interdisciplinary teams to enhance AI methodologies for large-scale data processing applications.
- Software Consultant** *Distophy Solutions* Jan 2022 – Aug 2024
- Spearheaded the design and implementation of AI-driven solutions that significantly optimized core business workflows and boosted operational efficiency.
 - Developed and deployed scalable machine learning models, enabling advanced customer service automation and precise predictive analytics.
 - Integrated Natural Language Processing (NLP) solutions, successfully powering advanced chatbot capabilities and comprehensive sentiment analysis to elevate customer engagement.

Education & Certifications

- Bachelor's Degree in Mathematics** *Universidad Nacional de Colombia*
- Developed a strong analytical and theoretical foundation through intensive coursework in modern algebra, numerical methods, and core computer science principles, essential for advanced AI and machine learning applications.
- Specialization in Programming** *University of California, Irvine* Jun 2023
- Focused on applying Golang and Python to practical challenges in Machine Learning and Scientific Programming, gaining hands-on experience in building computational tools and algorithms.
- Specialization in Machine Learning** *Imperial College London* Apr 2025
- Deepened understanding of the advanced mathematical principles underpinning modern AI and ML models, including areas critical for algorithm design and model interpretation.

Projects

- Multi-modal Data Analysis for FIB-SEM**
- Developed a machine learning model to optimize FIB-SEM data processing, improving image analysis effi-

ciency through the application of advanced numerical methods in Python and MATLAB.

AI-Enhanced Code Review Integration

- Collaborated on integrating AI/LLM tools into the development pipeline to automate code reviews, ensuring high standards of accuracy, efficiency, and maintainability.
